

Build Instructions

1. Download and run either MAMP or XAMPP or any other kind of application that creates a PHP server with PHPMyAdmin
2. Go to the PHPMyAdmin page on MAMP or XAMPP by clicking the start button then hitting the link to PHPMyAdmin
3. Import SQL file on GitHub into phpmyadmin to create the recent database and tables being used
4. Download website files and put them into the hotdocs folder in MAMP or XAMPP directory
5. Go to your localhost and put the local address of the files (click the start button on MAMP or XAMPP and you will get something like <http://localhost:8888/MAMP/> just charming it to something like <http://localhost:8888/Vicky/home.php>
6. Enjoy!!
